## • Quick Quote and Measuring Guide •

Always use a steel measuring tape and round down to the nearest 1/8 inch. Record actual measurements and we will take necessary deductions.

**Inside Mount:**

- Width: Measure inside of the window casing or mullions at top where brackets will be placed. You will need a minimum depth of at least 2" to mount the shade inside.
- Height: Measure from top of casing or mullion to the bottom of window.

**Outside mount:** (*Mounts on face of window trim or mullion*)

- Width: Measure from side to side where brackets are to be placed. Allow at least 1.5 inches extra on each side for fabric to cover glass entirely.
- Measure and list window from left to right looking out from inside.
